DETAILED ACTION

1. In view of the Appeal Brief filed on 9/29/09, PROSECUTION IS HEREBY REOPENED. New grounds of rejections are set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) initiate a new appeal by filing a notice of appeal under 37 CFR 41.31 followed by an appeal brief under 37 CFR 41.37. The previously paid notice of appeal fee and appeal brief fee can be applied to the new appeal. If, however, the appeal fees set forth in 37 CFR 41.20 have been increased since they were previously paid, then appellant must pay the difference between the increased fees and the amount previously paid.

A Supervisory Patent Examiner (SPE) has approved of reopening prosecution by signing below:

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2611

2. Claims 1, 5 - 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Fang (US 6,118,499).

Regarding claim 1, A receiver (1) for receiving radio frequency signals and comprising:

a first stage (3) (i.e. **frequency amplifier, 50 of Fig. 1**) for amplifying (which amplifies) and tuning (i.e. **mixer, 40 of Fig. 1**) radio frequency signals and for generating intermediate frequency signals (i.e. **as shown in Fig. 1, the output of mixer is IF or intermediate frequency which is then filtered by BPF**);

a first gain controller (38) (i.e. **VCO 140 and control circuit, 140 of Fig. 1**) for controlling a gain of the first stage (3) (i.e. **VCO of Fig. 1, as shown in Fig. 1 it controls the mixer which controls the amplifier of Fig. 1**);

a second stage (5) (i.e. **after the first IF BPF, it amplifies, 80 of Fig. 1**) for amplifying and demodulating the intermediate frequency signals (i.e. **the amplifier amplifies the output from the BPF and then it is being demodulated in digital demodulator, 120 of Fig. 1**);

a second gain controller (54) for controlling a gain of the second stage (5) (i.e. **the second VCO 150 and control circuit**); which first and second gain controllers (38,54) control the gains independently from each other (i.e. **as shown in Fig. 1, the both VCO work independently to control the mixer which eventually helps control the amplifier**) with the first gain controller to control the gain of the first stage based on a modulated intermediate frequency

Art Unit: 2611

signal (i.e. as shown in Fig. 1, the first stage controls the modulated intermediate frequency), and the second gain controller to control the gain of the second stage based on a demodulated intermediate frequency signal (i.e. the second stage controls the demodulated intermediate frequency signal).

Regarding claim 5, The tuner has substantially same limitations as claim 1, thus the same rejection is applicable.

Regarding claim 6, The demodulator has substantially same limitations as claim 1, thus the same rejection is applicable.

Regarding claim 7, The method has substantially same limitations as claim 1, thus the same rejection is applicable.

Allowable Subject Matter

3. Claims 2 – 4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
